ARTIFICIAL ARCADE VI

PS02: Chaos Control

Sabotage the System

Category : Multiplayer Competitive Strategy & Arcade

In this challenge, teams must develop an exciting two-player competitive game where one player attempts to complete objectives while the other strategically manipulates the environment to prevent their success.

The game should focus on asymmetric gameplay, where both players have different roles, abilities, and strategies.

Problem Overview

Your game should

demonstrate:

* Two-player gameplay (local or online multiplayer)
* Two distinct roles: Objective Runner and Saboteur
* Interactive traps, obstacles, and environmental mechanisms
* Strategic decision-making and resource management
* Role switching and competitive scoring

Core Goals :

This challenge aims to evaluate:

* Innovative multiplayer game design
* Asymmetric gameplay implementation
* Strategic thinking and game balancing
* Interactive environment development
* Smooth controls and player engagement

⚠️ Compulsory Requirements

* Minimum 2 active players (local or online)
* Minimum 3 playable arenas or stages
* At least 3 interactive environmental elements
* Functional role-switching mechanism after each round
* Limited sabotage abilities to ensure fair gameplay
* Timer-based or points-based scoring system
* Clear win/loss conditions, round restart, and final results screen

Innovation & Creativity Matter!

Participants are encouraged to think beyond traditional gaming concepts and introduce unique mechanics, engaging visuals, and creative gameplay experiences.

Focus on building a functional, enjoyable, and innovative game within 24 hours.

We look forward to witnessing your creativity, technical skills, and exciting gaming experiences!
